From this day forward

Introducing the completely redesigned Fenwick family of rods

There is no shortage of good things in the world today. Thanks to the advancement of technology and manufacturing, good is everywhere. Good is the new average. Good is the new standard. Good is the price of admission.

There's nothing inherently bad about good. It's only that it is so plentiful and, as a consequence, unremarkable.

From this day forward, we declare good to be our enemy. If good is the enemy of great, then we will work tirelessly to flush good from our thinking and our rods.

Starting now, we no longer accept the terms of good's offer, no matter how easy, agreeable, practical, cost-effective, or efficient those terms may seem.

Good has no guts

Good doesn't want to push the envelope. Good just wants to lick the stamp.

For decades, Fenwick has built a legacy of making high-quality fishing rods known for their trademark sensitivity. Today, we are throwing all of those perfectly good rods out. Because, at the end of the day, we know they could be better.

We did not just redesign a few rods. We bet the entire farm and the lake and the river with it.

With Fenwick's famous sensitivity as our north star to guide us, the result is an all-new, entirely redesigned family of 264 rods spread across four performance series—Eagle, HMG, Elite and World Class—crafted to

provide ultimate sensitivity for every species and your specific technique.

Good is inconsistent

Good isn't consistent or disciplined. Good is all over the place.

Throwing out our entire product line and reinventing Fenwick from scratch has freed us to do something unthinkable. Something that is nonexistent in the fishing world—an entire brand of rods designed at the same time, by the same people, under the same vision to achieve consistent uniformity in performance throughout the entire family.

Until now, rod brands have always been a mishmash of new and older designs with little consistency.

By contrast, the new Fenwick line is designed to provide what we call “family flex.” This means that each rod's match in specifications across each performance series shares the same action. If a rod fishes a 1/2 jig perfectly to your liking, its counterpart will do the same. So you can fish up and down the Fenwick family, and every Fenwick will fish like a Fenwick.

What separates the Eagle, HMG, Elite and World Class is a continual refinement of materials and processes. There is no good, better, best. We worked to make excellence our starting point and went upwards in sensitivity and lighter-weight materials from there.

d, good is our enemy.

Good settles for good enough

Good is potential without ambition. Good is ability without sacrifice.

It's not one thing that makes a fishing rod great. It's many. A culmination of dozens of deliberated choices that, when added together, become greater than the sum of their parts.

Every detail and choice in the new Fenwick rods is driven by performance to provide anglers with ultimate sensitivity, allowing them to better feel what they can't see.

This starts with a true blank that runs from tip to butt with no separation. Though it's harder to build, the result is an unimpeded, direct line of communication from your lure to your hand.

Because sensitivity is felt in the hands, we studied how hundreds of different anglers hold a rod. Working with experts in surgical-tool ergonomics, we created a bulb profile that fills the hand more comfortably, providing more confidence and control and less hand fatigue.

A full blank side exposure in the grip makes the rod feel more alive, delivering all the sensitivity of the rod blank more directly to your hands.

Materials were painstakingly chosen for weight, balance

and feel—from composite and standard cork to EVA foam.

While people often think that a sensitive rod is a result of it being lightweight, in reality, it's a rod's balance of weight that is most important. Each of the 264 rods has been meticulously balanced from tip to butt to provide remarkable sensitivity and feel.

This attention to detail is even found in the paint: Environmentally friendly paints were chosen that are transparent for less weight and better performance.

Good is gone

Yesterday is history. Today we start again. From this day forward, good will find no quarter in our thinking or our rods. Good will find no neutral ground

to pitch its tent. Good has no home here. Good has been escorted from the building.

Because a legacy means nothing unless you are carrying it forward. If you are not pushing, expanding or challenging yourself and the field, you will never achieve something great—only a different shade of good.

The world doesn't need another good fishing rod. We're here to make the best fishing rods humanly possible. Rods that make every minute on the water count. Rods that let you feel everything.

FEEL EVERYTHING™

fenwickfishing.com

Sensitivity isn't a trait. It's a craft.

Introducing an all-new family of 264 Fenwick rods across four performance series—Eagle, HMG, Elite and World Class. What separates the four series is a continual refinement of materials and processes. There is no good, better, best. We worked to make excellence our starting point and went upwards in sensitivity and lighter-weight materials from there.

Family Flex So Every Fenwick Fishes Like A Fenwick

The new Fenwick line is designed to provide what we call “family flex.” This means that each rod’s match in specifications across each performance series shares the same action. So anglers can fish up and down the Fenwick family, and every Fenwick will fish like a Fenwick.

Revolutionary New Ergonomic Handle Design

To reinvent the grip, we studied how hundreds of different anglers hold a fishing rod. We worked with experts in surgical-tool ergonomics to develop a bulb profile with the optimum diameter to fill the hand more comfortably. A full blank side exposure in the grip frees the blank to communicate all the subtle and nuanced information more directly to your hand.

Individually Balanced Rods Increases Sensitivity

While people often think that a sensitive rod is a result of it being lightweight, in reality, it's a rod's balance of weight that is most important. Each of the 264 rods has been meticulously balanced from tip to butt with everything from handle design to guide placement to provide remarkable sensitivity and feel.

Direct Control Taper Design For Crisp Actions

Each Fenwick rod features a more abrupt taper change at specific points vs. changing over a longer distance. The DCT design is integrated into the taper of the rod from the mandrel, thus minimizing the need to add or subtract material from the rod blank, imparting more crisp actions. DCT design enables Fenwick rods to have more defined actions for specific applications and techniques, improving every aspect of our rods.

WORLD CLASS.

ELITE

HMG.

EAGLE.

WORLD CLASS.

The World Class angler demands the best of every cast, presentation, and hookset. Truly in a class of its own, the Fenwick® World Class® series embodies our most sensitive, and lightest weight rods in our 70-year history to create an immeasurable experience that telegraphs the exact moment a fish surges toward the lure. Painstakingly redesigned, these rods will be known for sensitivity, perfect actions for their given applications, and purposeful balance. No detail was found insignificant. Every detail was scrutinized. From brand new blanks utilizing a blend of 40 and 36 ton graphite, to the proprietary reinforcing resin, and Fenwick designed soft touch reel seats that fit naturally in hand and amplify an angler's ability to detect changes in structure, lure movement, and most importantly bites. The new World Class is an example of our obsessive passion to make the world's best fishing rods.

ELITE

The Elite angler leaves nothing to chance, nor should the rods they choose to pursue their passion. Our most complete series of technique specific fishing rods to date, the Fenwick® Elite® series is a collection of 69 models, each expertly crafted from 36 and 30 ton graphite and all protected by a proprietary reinforcing resin. The result is an incredibly sensitive series of rods that will pack a punch on the hookset. Crafted with Fenwick designed soft touch reel seats, the rods fit naturally in the hand and amplify an angler's ability to detect changes in structure, lure movement, and most importantly, bites. A collection of the best fishing tools for anglers, the Elite series is sure to delight the senses of anglers, regardless of what fish they are chasing.

HMG

Fenwick® HMG® changed fishing forever in 1973 by creating the first-ever all-graphite fishing rod. HMG continues to stand for High-Modulus Graphite, which remains at the core of today's HMG Series, represented by a blend of 30 and 24 ton high-modulus graphite. Continuing to honor our legacy of craftsmanship and innovation, a proprietary new design process delivers excellent sensitivity and very crisp actions for all applications. Fenwick designed soft touch reel seats provide great hand feel and direct access to the most sensitive part of the rod, the blank. The original HMG® became a legend in the hands of Anglers worldwide. The culmination of over 70 years of history in making the best rods for the most discerning anglers has inspired the new HMG. Our goal - to impress you all over again.

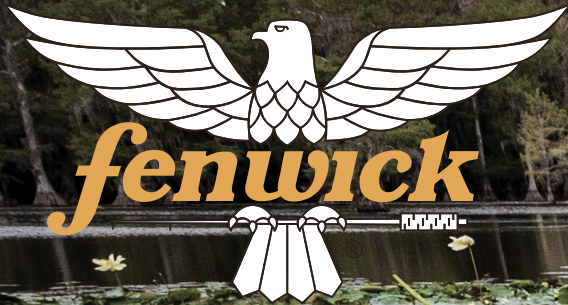

EAGLE®

No matter the specie, how difficult the cast is, or challenging the conditions, the Fenwick® Eagle® series ensures it is game on when you feel the slightest tick. Completely redesigned from top to bottom, the new Eagle rods are masterfully balanced, minimizing forearm fatigue thanks to the legendary Fenwick craftsmanship that allows for a better in-hand feel while maximizing sensitivity. The actions on each of the 56 models are crisp and constructed with a blend of 24 and 30 ton intermediate and high-modulus graphite and a proprietary new design. Fenwick designed soft touch reel seats provide a great in-hand feel and direct access to the most sensitive part of the rod, the blank. The series features many classic Fenwick actions anglers know and love as well as some surprising new technique specific actions to continue our tradition of craftsmanship and innovation and bring Eagle to the next performance level.
